Submit a Scholarly Project Proposal

Please provide responses to all questions and review your information carefully before submitting. **Once submitted, your application cannot be changed.** Upon submission, an email with your proposal will immediately be sent to your mentor to receive their confirmation.

The application must be completed and submitted on or before **September 30th**. The scholarly projects faculty committee will meet after this deadline and you can expect to hear about their deliberation within a month after the deadline. If you have any questions about the proposal process or this form, please contact your Honors College advisor or send an email to scholarlyproject@purdue.edu using the subject line "HC Project Proposal."

Project Description

Select the option you will use to fulfill the requirement.

In 150 words or fewer, explain the research or creative questions that drive your project, as well as the stakes of the project (i.e., What is the significance of the project or what problem will it solve?).

In 150 words or fewer, explain what new knowledge you hope to create through this project. That is, what new ideas, concepts, devices, technologies, analyses, datasets, designs, performances, verse, arguments, etc. might arise from this work? One possible way to articulate the new knowledge that you hope to create is to indicate the state of the field and the critical gaps in the field that you hope to fill.

In 50 words or fewer, explain how the project will result in an independent "deliverable." Most often, the independent element will be demonstrated by the end result (a paper, report, performance, website, code, data analysis, etc.). In some cases (for instance, when the expected results will be patented or copyrighted and therefore must be held in confidence for some time), a student may document the methods and process rather than the findings. In all cases, students are encouraged to plan on including a short critical reflection on their work as part of the verification process.

In 100 words or fewer, explain the individual contribution you expect to make toward the research or creative project. If you are working independently with your mentor, please indicate this. If you are working collaboratively on a project with another student or students, explain the nature of the collaboration. If your collaborators are Honors College students, please list their names here.

In 50 words or fewer, explain the communication expectations on which you have agreed with your mentor (for instance, how often you will meet, attendance at group meetings, special preparation or training, authorship rights, etc.). If your work involves human or animal subjects, please specify if you have (or will) submit an Animal Use Qualification form or IRB protocol related to your research.

In 50 words or fewer, indicate the venue for the

public presentation that you expect to make (conference paper, published journal essay, university poster symposium, *JPUR* publication, etc.).
